

## SASINpos™ (Point of Sale) – POS

Whether you currently have existing cashier stations and/or storefronts, or if your company is in the process of expanding to these revenue-increasing outlets, a POS system will enable you to efficiently record your payment and sale events.

### Customers' benefits

- One stop shopping – pay phone bill, purchase products, services and accessories from a single location
- Payments – pay over the phone or in person
- Record of transaction – receive payment statements and receipts of transactions

### Business/Financial benefits

- Pre-authorization of checks reduces NSF's. Pre-authorization of credit cards.
- Cashiers quickly balance end of shift and cash drawer discrepancies are easily identified.
- Scanning of customer account number and payment amounts significant reduce data entry errors. Automation of payment receipts process improves cashier efficiency.
- Revenue identification – categorizes revenues and updates financial and billing systems

### Technical benefits

- POS system is designed to run in independent or client/service mode allowing business to continue during maintenance periods/outages of host server. The POS system continues to record sales and payment transactions and synchronizes with host when communications are restored.
- Interfaces – leverage established interfaces to ICMS, or utilize our experience and knowledge in developing a solution that meets your business requirements
- Single solution – use a single solution to record payments for new and existing services, products and accessories.

## SASINbp® (Electronic Bill Presentation and Payment) - EBPP

As emails have become a normal communication avenue, receiving, viewing and paying monthly invoices online are also becoming standard household money management events. Sateri Systems' SASINbp® product has been developed to meet the changing consumer demands and the telecom company's requirement to remain competitive.

### Customers' benefits

- Ease of use – intuitive design makes for simple navigation
- Online statements – view invoices / statements when it suits your schedule
- Secured online payments – make payments using electronic checks (e-checks) or major credit/debit cards such as Visa, Master Card, American Express
- On demand printing – use your home printer to print a hardcopy of your statement, or download your statement in PDF format
- Current and Historical data – view and sort telephone calls by date, amount, places called. Produce charts and graphs for a visual representation of your calling patterns

### Financial benefits

- Reduce cost – sending invoice notifications via email to your customers efficiently utilizes resources and assets at the same time reduces printing and mailing costs
- Improve days outstanding on receivables – online payments significantly reduce days outstanding by eliminating the need to rely on the out-dated manual postal systems and the manual entry required to post those payments
- Quick to market – Business benefit from reduce implementation costs by utilizing the existing interface API. API's can easily be developed to interface with any billing system.

### Technical benefits

- Deployment – product is deployed on IBM and non-IBM platforms for any database supporting Java (i.e. iSeries (AS/400), xSeries (Intel-servers), Windows, Linux)
- Interfaces – take advantage of the developed and proven ICMS interfaces, or utilize our experience and knowledge in designing and developing interfaces that meet and grow with your business needs
- Processing – robust engine and high tech design provides flexibility in the management of huge transactions / volumes

## SASINbi™ (Business Intelligence)

Customer information is a major asset to thriving businesses. Without it, a company becomes crippled in processes and unable to easily and effectively discern movement in the market.

### Imagine how...

- ❖ Customer intelligence at your fingertips helps you create innovative products and services
- ❖ Customer purchase habits help track trends and forecast market shifts
- ❖ Usage trends enables you to widen the gap of costs and revenue by implementing better strategies of underutilized system infrastructures and other assets/resources
- ❖ Data mining and standard reporting help disseminate business intelligence throughout your organization
